Agrisure Viptera® offers the most comprehensive corn insect control in the industry. It is the only trait currently available that effectively controls western bean cutworm, and also protects the crop from key above-ground insects like corn earworm, cutworm and armyworm.

## Western bean cutworm

Western bean cutworm is native to North America and has progressively spread through Ontario and Quebec. Masses of up to 200 eggs are laid on the plant leaves, so populations can grow quickly.

Agrisure Viptera relies on a unique vegetative insecticidal protein (VIP) that binds to a receptor site in the lining of the western bean cutworm’s mid-gut. Because VIP targets this site, rather than the sites traditionally targeted by crystal (cry) proteins, Agrisure Viptera delivers a high dose kill, making it the most effective trait for control of western bean cutworm.

## Agrisure Viptera trait stacks

	Description	E-Z Refuge	Types of insects controlled <sup>1</sup>
	Unsurpassed control of broad lepidopteran pests and corn borer with two modes of action and integrated E-Z Refuge®. This trait stack provides tolerance to glyphosate.	✓	Above-ground
	Excellent control of above-ground insects, plus control of corn rootworm, to protect the crop’s genetic yield potential.		Above- and below-ground
	Excellent control of above-ground insects where corn rootworm is not a key problem. This trait stack provides tolerance to glyphosate and glufosinate.		Above-ground
